

AN
ALMANACK

FOR THE
Year of our LORD GOD, 1656.
BEING

Bissextile or Leap-Year.

And since the Creation of the
World, 5605.

Containing the apparent motion of the
Sun and Moon, their Aspects, with o-
ther several useful Astronomical Calcula-
tions for the whole Year.

Also brief observations on the four
Quarters of the year: Describing the Dis-
eases incident to each Quarrer, ac-
cording to the best Rules in
ASTROLOGY.

Being calculated for the Meridian of
London, and may, without Exception, serve
for these Western Islands.

By *Gabriel Blunt*, well-willer to
the Mathematicks.

London, Printed by *Job. Streater*, for the
Company of Stationers, 1656.

Common Notes and moveable Feasts, according to the *Julian* or *Engl^{ish}* Accompt, for the Year 1656. Being *Bissextile* or *Leap-year*.

*The use of this Table is thus, If thou wouldest know what
the Interest of One hundred and five pounds is for 9 Moneths
at six per cent. then in the first column finde out 100. at the
foot of the column; and right against it under the Title 9 mon.
which is the fifth column, and there you shall finde 4 l. 10 s.
and against the number 5 l. you shall finde 4 s. 6 d. so that
the Interest of 105 l. for 9 moneths, cometh to 4 l. 14 s.
6 d. the like of all the rest.*

The beginning, continuance, and ending
of the Kings Reigns since the Conquer with
the time how long it is since to this
Year, 1656. Being fit for Scriveners, and such
as are employed in Law causes.

A
PROGNOSTICATION
FOR THE
Year of our LORD GOD, 1656
BEING

Bissextile or Leap-Year. .

Containing several observations
upon the Eclipses that happen
this present year :

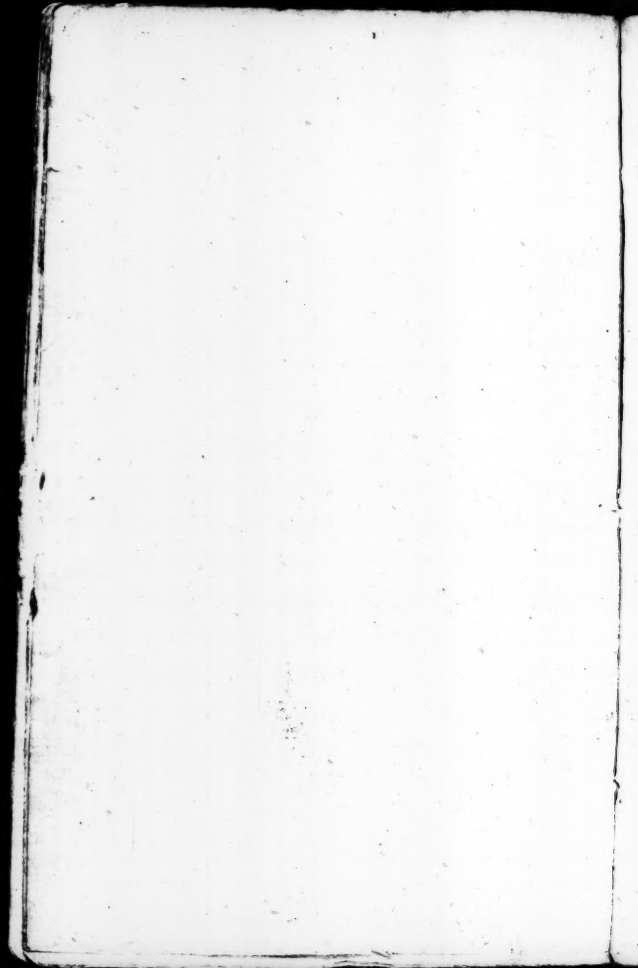

Together with a Description of the four
Quarters of the year.

Also Rules for the attaining the
Elevation of the Pole.

Whereunto is added very profitable Di-
rections for the sending of Letters to any parts
of these Dominions : And also to send Let-
ters to the most habitable parts of the
world, and to have an answer,

By *Gabriel Blunt*, Well-willer to Astronomy.

Imprinted in the Year, 1656.

Of the Eclipses that shall happen this
present Year, 1656.

This year will be five Eclipses, two of the Sun,
and three of the Moon; of which onely two will
be visible to us, and that both in one moneth,
viz. January,

Of the first Eclipse, of ☾.

The first will be of the Moon, on the first day of
January, at 34' and 46'' past 8 at night: This
Eclipse happeneth when the Moon is in ☿ Can-
cer 21 degr. 29' 43''; ☉ the Sun in 21 degr. 29' 43''
of ♊ Capricorn, the Moon in the 11th house, the Sun
in the fifth house. The effects of this Eclipse will be
want of Treasure to Princes, many and turbulent
discontents among their people,

The places most subject to this Eclipse, will be
Scorland, Granado, Burgundia, Holland, Zealand, Pru-
sia, Numidea, Bithynia, Phrigia, Carthage; of Cities,
Constantinople, Tunis, Venice, Geneva, Luca, Pisa, Me-
lan, Bern, York, St. Andrews, Lubeck, Madgleberg, Wer-
renberg; and the effects will extend unto all the Na-
tions unto which it is visible; amongst the rest, the of
England shall be shavers: But to view the figure of
this Eclipse more particularly, we finde ♄ Saturn in
the 11th house, within 13 degr. of the ascendant in ♊
Capricorn, it being the Exaltation of ☿ Mars, and the
Nocturnal house of ♄ Saturn, in which he is Retro-
grade ♃ Jupiter, in the 8th house, within 6 degrees of
the cusp of the 9th house, in the 21 degree of ♈ Aries,
2 and

A Prognostication

and ♂ Mars in the 8th house, ♀ Venus and ♀ Mercury in the 4th house, in the sign ♄ Sagittarius; upon which position of the Heavens this Judgement may be given, viz. That many shall be the troubles of this age, and various shall be the Transactions of Publique Affairs; People will be in cens^t at the Impositions laid on them, the which will increase their desire to changes. Several remote Princes, will by reason of their eminent Emergencies, be forced to draw vast sums of money to keep up their credit and Arms: his head that is lowest will be free from danger: Merchants will suffer eminent dangers at Sea; the fishes of the Sea will not be free from the influence of this Eclipse; the water-soul will bear part thereof, in regard the Eclipse happeneth in ♊ Cancer, a sign of the watery Triplicity.

Of the second Eclipse of ☉.

This Eclipse happeneth on the tenth day of January, at 40 min. 59^{''} 12^{''} past noon, the ☉ Sun and ☾ Moon being in ♊ Conjunction in ♒ Aquarius, 6 deg. 26' 44'' it being at that time in the cusp of the 11th house; the places most subject to this Eclipse are Tartaria, Samaria, Valachia, Moscovia, Sweathland, Westphalia, Mosel, Piedmont, Bavaria, Ethiopia, Sogdiana, Media and Arabia the desert, and of Cities, Hamburg, Breme and Trent.

The effect of this Eclipse shall be of great detriment un^o the aforesaid Countries and Cities, by War, Pestilence and Famine, and as was said before of the Eclipse of the ☾ Moon: The places unto which the Eclipse is visible, shall be shavers of the Eclipse. So now the same may be concluded of this Eclipse, the City of London shall not be free of the Influence thereof; the Lawyer and Clergy shall suffer much
by

For the year of our Lord, 1656.

by the multitude, who increaseth much to weaken their
repute by Defamations; Religion shall much suffer
and be slighted: it is to be feared that over extraordi-
nary plenty will abate, and sickness abound.

The third Eclipse of ☾.

The third Eclipse is of the Moon, upon the 26 of
June, which will be seen in Judea, Arabia, China,
Lapland, in the Islands of Sumatra and Philippino.
The Countries subject to the influence thereof will be
Macedonia, Illyris, Thracia, Albania, Bulgar, Part of
Greece, Lituania, Saxonia: Cities that shall be shar-
ers of the influence of this Eclipse, will be Oxford,
Mechlin, Brandenburg and Constance.

Of the fourth Eclipse of the ☉.

The fourth Eclipse is of the ☉ Sun, it happen-
eth upon the 11 day of July in the evening, it will
be total in the Southern parts of the Earth, es-
pecially in the Straights of Magellanica.

The Countries subject to this Eclipse, will be
France, the Alps, Italy, Cicilia, Apulia, Bohemia, Phæ-
nicia, Chaldea; and of Cities, Damascus, Syracuse, Rome,
and Prague, &c.

Of the fifth Eclipse of ☾.

The fifth and last Eclipse is of the ☾ Moon, on
the 21 of December, it will be visible to our An-
tipodes, to California, the Gulf of Mexico, Nova
Hispania, Barbado's, and the Island of Good Hope; those
places are subject to the influence of these Eclipses
that are subject to the influence of the Eclipse that
happeneth on the first of January, for that it is in Cancer,
the same Sign that the ☾ Moon was in: then,

To obtain the Poles Elevation by the Sun or Stars.

1. Canon.

If the Sun be in the Equinoctial points, March 10. or September 13. you may obtain it by the Suns Meridian Altitude, for then the Sun hath no declination. Subtract the Meridian Altitude (exactly taken by some large minuter Quadrant or Staff) from the Radius 90° , and the remainder produces the Elevation desired.

2. Canon.

1. If the \odot be in the Summer Solstice; subtract the \odot greatest declination from its greatest altitude, and the residue is the elevation of the Equator, which Elevation of the Equator being subtracted from 90 , leaves the Poles Elevation; as,

\odot Altitude, $61^\circ 59' 30''$.	89.60 .	The Quadrant.
\odot Declination, $23 31 30$.	$38 28$.	Elev. Equat.
Elevation of the Equator,	$38. 28. 00$.	$51 32$ Poles Elevat.
		at London.

2. If the \odot be in the Winter Solstice, then add his Altitude and Declination into one Sum; and the product subtracted from 90 , gives the Poles Elevation.

3. Canon.

A Prognostication

3. Canon.

If on any day of the year you desire the Poles Elevation, then take its Meridian Altitude, and by the exactest Tables or Ephemerides, finde the ☉ place in the Zodiack, and by that calculate his Declination.

1. If the ☉ be in the Southern Signs, next adde the ☉ declination to his Altitude, and subtract the product from 90. There will remain the Poles Elevation.

2. If the ☉ be in North Signs, subtract his declination from his Altitude, and the remainder deduct from 90. what remains after the second subtraction, is the Poles Elevation.

Of all these three ways, the best is by the Summer Solstice, because then the declination for 2 or 3 days varies but by seconds; and besides, all danger of refraction and Parallax is avoided: I wish it to be done by a Staff of a yard length, to be divided into 100 equal parts, and set Perpendicular, to an exact Horizontal plain; and then calculate by lib. 2. cap. 1. of Wings Harmon. Cœleste. onely remember to abate for the ☉ Semidiameter, according to the proportion of Cassendus his observations.

☉ in his	{	Arogy 30' 12"	Sæ Cassend- Institur.
		Perigy 31' 6"	Astron. lib. 2, cap. 9.

Remember also that the third Canon concerns those onely that live North of the Equator, as we in Europe do. Let others that either live or trabel South of the Line, consult Norwood 4^o. pag. 163. or Newton in 1^{2o} pag. 418.

For the year of our Lord, 1656.

4. Canon.

If at any time of any day in the year, you desire to know the Poles Elevation. Then take the ☉ Altitude by the Staff, and then his distance from the Meridian, and by the rule of Proportion say, If 30 gr. distance from the Meridian, give 22 gr. of Altitude, what 0 gr. distance or the Radius, give for the true Meridian Altitude. Then finding the declination for that day, work as by the third Canon.

If you observe the ☉ Meridian Altitude in both Solstices in the same place; then the least taken from the greatest, leaves the distance of the 2 Tropicks; which distance divided into half, gives the ☉ greatest declination; which declination being subtracted from the greatest, or added to the least Altitude, produces the Elevation of the Equator, which Elevation being subtracted from 90 the whole Quadrant, there will remain the Poles Elevation.

Of the four Quarters of the Year.

Of the Spring.

THe Spring beginneth when the Sun entereth ♈, which will be the 10 of March, at which time ☉ becometh an equal Arbitrator of the nights & days: then doth the Earth begin to smile, and send forth the testimony of the virtue of the warm Sun-beams, by producing fruitfulness in all Herbs and Plants; and merry Birds are not wanting in warbling notes to demonstrate their joy.

This

A Prognostication

This Quarter is by nature hot and moist, and therefore most suitable for production. It is an old Rule in Philosophy, That heat is the Father, and moisture the Mother.

This Quarter is the only fit time for those that are affected with distempers, to apply themselves to Rules of physick. The diseases incident to this Quarter are Tertian Feavers, Jaundies, Impostumes, Boyles, Itches, Tetter, Morphue, Ring-worms, Measels, Small-pox, Obstructions, Spotted-Feavers, and such diseases as arise from the corruption of the blood.

Of the Summer Quarter.

THE Summer Quarter beginneth upon the Suns entering of Cancer & which will be upon the 11. of June; the Suns outmost Northern declination maketh the hottest weather, and longest dayes to us of the Northern Hemisphere, and contrariwise to them of the South.

This season is hot and dry, good for the ripening of fruits, The sicknesses and infirmities of this Quarter, are such as are ingendered of the humors by the temper of the season, viz. Hot burning-feavers, Phrensies, and Plurisies Inflammations, Imposthumes, and Vicerations in the Lungs, causing extream stinking Breaths.

For the year, 1656.

Of Autumn.

A *Autumn* or Harvest beginneth upon the Suns entring of *Libra* ♎ the which will be this year the 13. of *September*, which again bringeth the nights and dayes to an equality. This season is of all others the most uncertaine; it is of nature cold and moist; therefore dangerous for that it wants heat to digest the Crudities of the humors.

Therefore the diseases to this Quarter, are Quartan-Fevers, Apoplexes, Falling-sickness, Lethargie, Fluxes, Pain in the Back, and Reins, the Stone, Palsies, Convulsions, Cramps, Consumptions, Obstructions of the Splene, Melancholly: and such like.

The Winter Quarter

The *Winter* beginneth at the Suns entrance into *Capricornus* ♑ which is upon the 11. day of *December*, at which time the daies are at the shortest, by reason of the Suns being at his utmost Southern declination; The temper of this season is Cold and Dry. The diseases incident to this Quarter are, Rheums, Coughs, Palsies, Gout, Cramps, Convulsions, Collick, Apoplexies, Hoarseness, Flux, and pain in the Teeth.
